

Disaster

What is it?

Any natural or man-made event that disrupts the operations of a business in such significant way that a considerable and coordinated effort is required to achieve a recovery

(Barnes, 2001)

Not Just Natural Disaster

Power Failures
26%

Software Failures
9%

Hardware Failures
19%

Human Errors
8%

Network Outages
10%

Everything else
30%

Why Downtime Matters

43% of businesses experiencing a disaster never reopen, and almost 30% of those that do close within 2 years

Source : McGladrey and Pullen, LLP – a Consulting Company

93% of businesses that lost their datacenter for 10 days went bankrupt within 1 year

Source : US National Archives and Record Administration

10 Reason why should company consider DR ?

Because you can't afford **downtime**

Because we live in an **always on** world that requires always on capabilities

Because **your customers** and prospects expect it

Because **compliance and regulations** require it

Because you spent a lot in **building your brand**, and you need to **protect it**

Because you **can't predict** what data might be lost and the value it had for your company's well being

Because **mother nature** does not play favorites

Because it will **save your money**

Because **machine breaks**

Because **we're all human**

DR Challenges

- Too many moving parts and complexity
- Lack of automation – reliance on manual execution
- Driving without dials – no real time meters to monitor DR service
- DR drills are expensive and impact production

What should I consider?

Costs	Traditional DR	Cloud-based DR
Datacenter for Disaster Recovery (including facilities utility and electrical power source)	Own manage	Cloud Service Provider
Stand-by Hardware System	Own manage	Cloud Service Provider
Manpower – Network Operation	Own manage	Cloud Service Provider
Manpower – System & IT Security Operation	Own manage	Cloud Service Provider
Capacity expansion	Own manage (procurement process + more hardware to manage)	Easily provided through flexibility and agility of Cloud
Expense	1.5 – 2X	1 – 1.2X

Disaster Recovery Considerations

Why Cloud

Traditional DR

- + More control on your server
- + Keeps company data private
- + Data accessible locally
- Increase investment to build H/W and infrastructure
- More spending as company growth
- More space
- Maintenance cost
- Dedicated IT Support
- No uptime guarantees

Cloud DR

- + No H/W cost and capital expense
- + Scalable
- + Pay for what you use
- + Easily connect from everywhere, any devices
- + Data can be backup in the cloud regularly and efficiently
- Need internet connection
- Trusting a third party to keep data secure
- Ongoing cost

Disaster Recovery On Cloud

Why cloud ?

Recovery Time and Recovery Point Objective

What is RTO and RPO

Recovery Time Objective

- RTO for an application is the goal for how quickly you need to have that application's information back available after downtime has occurred

Recovery Point Objective

- RPO for an application describes the point in time to which data must be restored to successfully resume processing (often thought of as time between last backup and when a disaster occurred)

Disaster Recovery On Cloud

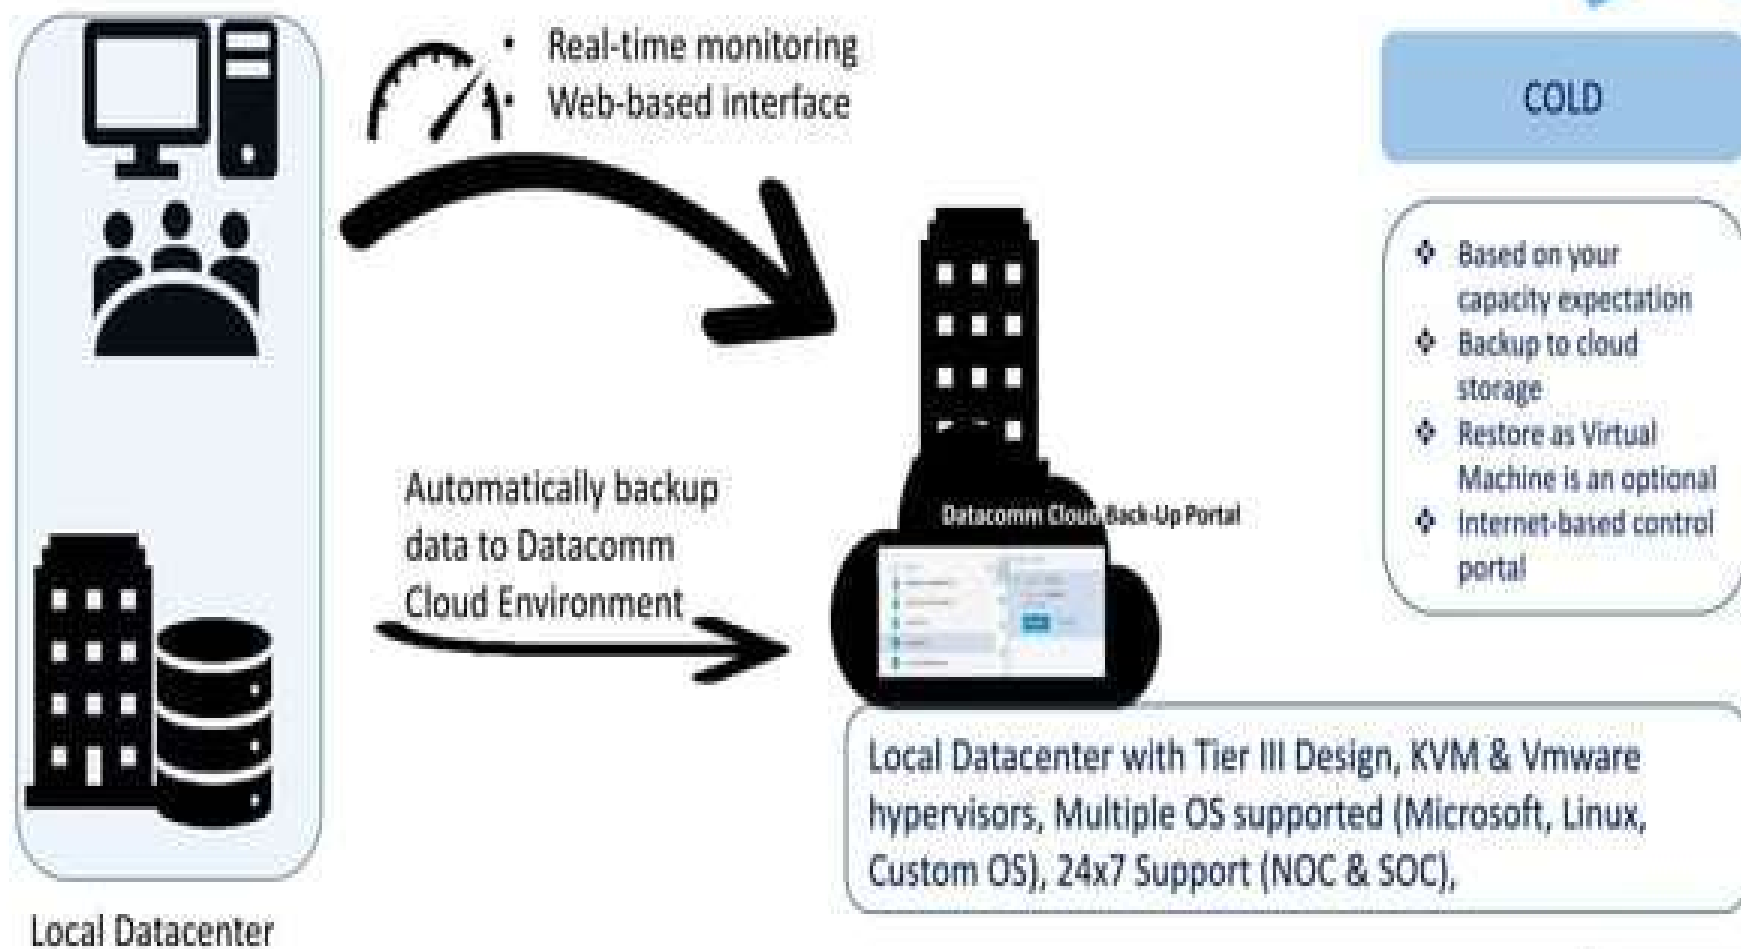

Datacomm Disaster Recovery as a Service

	DR Mode 	Services Needed 	Resources 	Failover Scenario 	Restore Time 	Supported Platform 
COLD DR	Back-up	BaaS	<ul style="list-style-type: none">• Storage• Compute (unreserved)	Restore	Up to one day / instance	<ul style="list-style-type: none">• Windows• Linux
WARM DR	Standby (off)	<ul style="list-style-type: none">• OS• IaaS• BaaS	<ul style="list-style-type: none">• Storage• Compute	Boot on VM	4 - 6 hours / instance	<ul style="list-style-type: none">• VMware• Hyper-V
HOT DR	Fully Automated	<ul style="list-style-type: none">• OS• Replication• IaaS	Dedicated	Automatically	Less than 10 minutes	<ul style="list-style-type: none">• VMware• Hyper-V

Disaster Recovery On Cloud

Datacomm Disaster Recovery as a Service

Disaster Recovery On Cloud

Datacomm Disaster Recovery as a Service

Local Datacenter

- Real-time monitoring
- Web-based interface
- Standby Resource

Automatically backup
data to Datacomm
Cloud Environment

Datacomm Cloud Back Up Portal

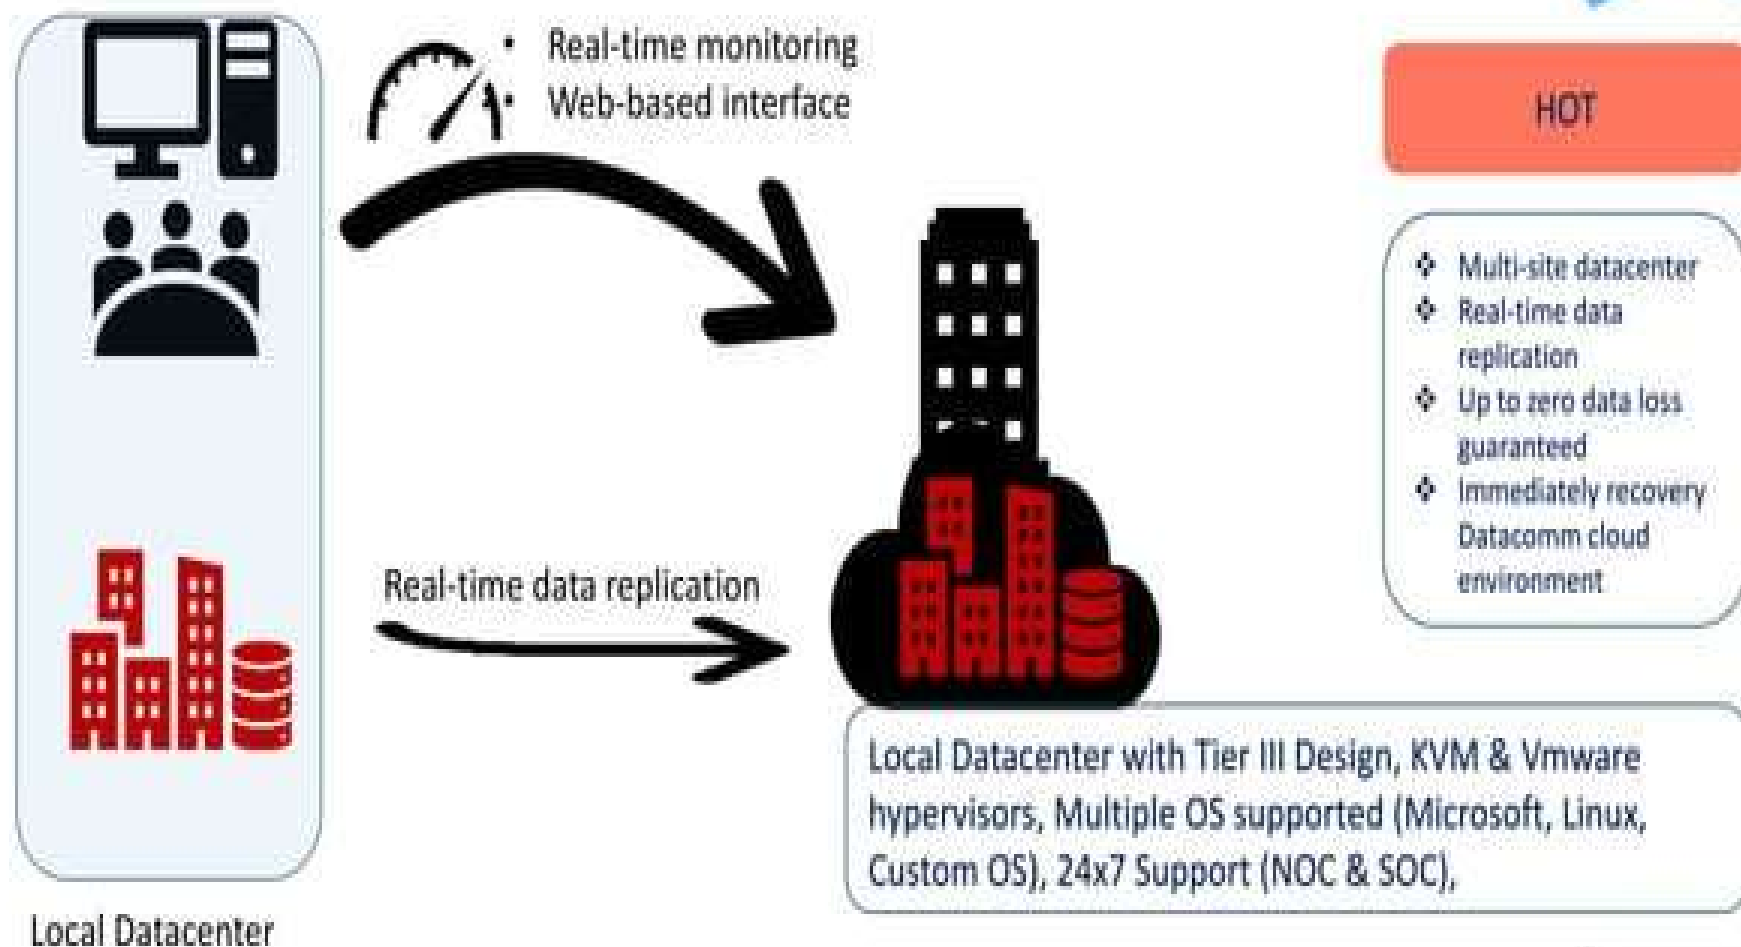

Local Datacenter with Tier III Design, KVM & Vmware hypervisors, Multiple OS supported (Microsoft, Linux, Custom OS), 24x7 Support (NOC & SOC),

WARM

- ❖ Compute resource reservation (standby)
- ❖ Recovery from your own baseline OS template
- ❖ Quick recovery to Datacomm cloud environment

Disaster Recovery On Cloud

Datacomm Cloud-based Disaster Recovery Solution

Disaster Recovery On Cloud

Key Features

- **High availability** – guaranteed 99.9% SLA data backup availability
- **Physical and virtual systems** – protection of both physical and virtual systems in one service
- **Automatic and scheduled backup** through online control portal
- **Up to zero data loss** guaranteed
- **File and disk image-based backup** - backup of selected files or complete disk images
- **Define your own baseline OS template** for recovery

Disaster Recovery On Cloud

Key features

- **Bare-metal recovery** – recovery to same or dissimilar hardware, even from the cloud
- **Comprehensive** - provides robust replication and offsite backup
- **Local and cloud storage** – support of local and safe cloud storage in our secure and local
- **Recovery reports** document execution of BC/DR processes, for easy auditing and reporting
- **'test-before-you-commit'** function allows test of a specific failover point before committing it, enabling 100% assurance that failover will be successful
- Test failover, including full remote recovery in a **sandboxed zone**

Sandbox for DR Testing

- Non-disruptive DR testing
- Create a test and development environment
- During the test, replication and the production environment is still in process
- Can be done during working days
- No downtime on the production environment

Recovery Report for Virtual Protection Group HyperV-CRMApp2

Report was generated on 04/02/2019 10:00:00

Recovery Operation Details

Initiated by: Administrator
Recovery operation: Restore Test
From or save: All VMs
Recovery operation start time: 04/02/2019 11:00:00
Recovery operation end time: 04/02/2019 11:00:00
RTO: 00:00:00
Recovery operation result: Passed for all
Error codes: 0 (Success for all VMs) (Success for all VMs)

Virtual Protection Group Recovery Settings

Protected VMs: All VMs
Recovery VMs: All VMs
Default recovery test: HyperV-Test
Default recovery retention: 7
Default test recovery method: Manual (Manual Agent - Virtual Test)
Default recovery folder: C:\Program Files (x86)\Data Comm\

Virtual Machine Recovery Settings
